Here is the file — all 83 sources reformatted as a full `MapAssessment` object conforming exactly to the `research-map-assessment.ts` schema (Zod v4).[1]

The file is structured across all 9 schema sections:

Section	Content
`sources[]`	All 83 sources as typed registry entries with `id`, `kind`, `title`, `publisher`, `url`, `publishDate`, `institutionalClass`, `geographicPerspective`, and `topics`
`positionality`	Agent background, language access, institutional access, known limitations
`axisAssessments`	6 power axes assessed: geographic, language, institutional, political-power, gender, race-ethnicity — each with `overrepresented`, `underrepresented`, `structurallySilenced`, and `balanceScore`
`sourceDistribution`	All 19 source kinds counted, total = 83, HHI ≈ 0.108 (moderate concentration)
`methodBiases`	English-only web search: what it reaches and what it misses
`coverageGaps`	6 gaps: Central/Eastern Europe, sub-Saharan Africa, environment/AIDS, language, contemporary reporting
`blindSpots`	5 blind spots: AIDS epidemic, Cold War Western framing, Iraqi/Kuwaiti civilian voices, disaster survivorship bias, anglophone pop culture frame
`remediations`	2 concrete remediation actions with `type`, `estimatedEffortDays`, `expectedImpact`, `status`
`verdict`	`claimsSupported: "partially-supported"`, overall balance 0.38/1.0, source diversity 0.89/1.0
